Education

The University of Chicago Chicago, IL

Bachelor of Science in Computer Science, Bachelor of Arts in Economics | GPA: 3.88/4.0 *Expected June 2028*

- Coursework: Foundations of Distributed Systems, Theory of Algorithms, Systems Programming

Experience

Software Engineer Intern June 2026 – August 2026

Infleqtion *Chicago, IL*

- Led development of a React/TypeScript dashboard for a critical quantum-computing cloud platform used by **100+ customers** and internal employees, owning the API integration layer end-to-end
- Implemented OAuth authentication using HTTP cookie exchange to secure sessions and prevent unauthorized access
- **Cut redundant API calls by over 60%** with a custom **client-side caching layer** over Redis to minimize network traffic
- Authored an **80+ test Vitest suite** for the API layer, combining mocked and live-server tests to validate authentication, token handling, and error paths using **GitHub Actions and CI/CD**

Visualization Software Engineer Intern September 2025 – May 2026

Research Computing Center's Data Visualization Laboratory *Chicago, IL*

- Optimized system performance by reducing application load time by over **95% (20 minutes to 40 seconds)** through **object pooling**, efficient memory management, and minimizing costly instantiations of 3D objects
- Extracted data from large NetCDF4 global climate datasets **(40+ GB)** using **Python** (XArray, Pandas), converting **10+ atmospheric variables** into optimized formats for 3D visualization
- Presented application to **NASA scientists** and over 15 computational scientists, including the center's director

Research Assistant Intern April 2025 – December 2025

SUPERgroup Research Collective *Chicago, IL*

- Greenfield development of an application that integrated with the **Anthropic Claude LLM API** to display automatically redacted PII, supporting an ongoing PhD research project on privacy and security where I am a co-author on 1 paper
- Improved performance and **decreased retrieval latency by 50%** by redesigning the UI and backend from the ground up
- Developed an **automated pipeline in Python** to assist in labeling and analyzing **over 1,000 data entries** from a dataset of 3,000+, collapsing multiple 2hr+ manual rounds of review into single 2-minute runs while maintaining data integrity

Projects

Media Viewing Platform | *React, AWS* github.com/WoothAmwar/Complete-Personal-Website

- Utilized the Google YouTube API to import user subscriptions and created a personalized homepage that retrieves latest content from **over 100 channels daily** to each user; implemented caching, channel tags, and a watch later system
- Engineered an **Agent Harness** for AWS Bedrock with LangChain, providing custom tools to access MongoDB and Lambda functions to create video playlists on demand in **under 15 seconds**
- Chose Lambda functions and MongoDB so page loads never hit the upstream YouTube API, **reducing latency by 70%** and minimizing total upstream API calls under a constrained YouTube API quota

MCP Server for Flight API | *Python, MCP* huggingface.co/spaces/WoothAmwar

- Built and hosted a **custom MCP Server** integrating the Amadeus Flights API to retrieve flight details between locations
- Used Python and Gradio, deployed on HuggingFace and integrated with a custom MCP Client and Claude Desktop to enable real-time flight data queries within user conversations

Schoolwide Game Tracking Platform | *React, MongoDB* github.com/GoldEnter21/NCSSM-Spoons-Online

- Shipped a website to organize our school's student-led game of tag with **over 250 registered participants**, giving them the ability to track player eliminations, check user information, and view a live leaderboard
- Created with React for the frontend, MongoDB to store information, and Vercel to host the application

Technical Skills

Languages and Tools: Python, JavaScript, TypeScript, C | Claude Code, Codex
Frameworks and Databases: React, Node.js, MongoDB, PostgreSQL | Raft, Paxos, Kafka
Backend & Cloud: AWS (Lambda, API Gateway, EC2, VPC, ELB), GCP, Model Context Protocol, Vitest, Playwright
